# List of tested webcams

If your webcam is not listed here, it does not automatically mean it is unsuitable. It just wasn´t tested yet.

If you are using a webcam that is not yet on the list and would like to help others, please send me an email at „**support@ledtrack.eu**" with the subject line „**List of tested webcams**" including the model of your webcam and a photo showing the webcam with the light filter attached for verification.

If you want to verify whether your webcam is compatible with LEDTrack before buying, follow these steps:
1. Install the Opentrack program according to the instructions on page 9 of setup and configuration guide.
2. In Opentrack, check whether you have access to manual camera settings. You can find these settings by navigating to: Options (in the main window) >Tracker >Camera >Camera settings >Open

The settings window should ideally look like the one shown on page 20, but most importantly, it must allow you to manually adjust **brightness**, **contrast**, **saturation**, **gain** and **exposure**. If these parameters are available and adjustable, your webcam is most likely suitable for use with LEDTrack.

Brand and model of the camera	Suitable?	Notes
Ausdom AW615	Yes	
SriHome SH001	No	Can´t change settings manualy
